Gallop TRACKER

GPS-SIGNAL

When Gallop Tracker is turned on it will automatically start searching for satellites. When looking for satellites the GPS indicator will be red.

The indicator is then and go over to yellow indicator and so green.

The colors indicate whether it has good or bad conditions. When the GPS indicator is green, the device is ready for use.

Yellow indicator shows that you have some disturbances and are in danger of getting something and deviations.

It is recommended and not start GPS search speed as this will cause the unit to become and spend a long time to get "green" conditions.

SUB MENU

By and select sub menu in the Master setting menu gets you into a sub menu.

GPS rendering: displays GPS string

Backlight adjustment: adjust light

Reset unit: reset the unit

Master Setting: menu image

Demo mode: on or off

Invert Display: The background color change

GPS rendering: displays GPS string

Demo mode allows you to see how the clock works with pre programmed GPS signals.

Invert display Provides the ability to change the background and the white and white font to black. This feature some say that works well in direct sunlight. (And a good nights and adjust the lighting to the max in direct sunlight)

Gallop TRACKER

About GPS

GPS is an American satellite system that the US government controls, and Trot Development therefore does not guarantee for identification around the GPS system.

It is integrated a GPS - antenna in your Tracker receiving GPS - signals from the satellites. It requires contact with a minimum number of satellites traveling time shall be presented properly. This signal may be weakened if the product is located close to houses, tall structures and the like.

About GPSindikatoren is yellow this indicates that you have something disorder, and there may be discrepancies. The deviation will be happy when the device switches between red and yellow.

Gallop TRACKER

Treatment of the product

CLEANING

The tracker can be cleaned with a damp cloth, but be especially careful cleaning of the screen. If cleaning is not done carefully it can quickly be scratching the screen. The screen will anyway be somewhat scratched after some time of use.

WASHING OF BELT

The belt can be removed and washed product for themselves. Reima withstand more rough hand washing than the rest of the product.
